THE TRADING SYSTEM

The V1 System

Trend continuation. Every rule I follow, in order, with an example for each step.

1. Daily routine
2. Pre-market analysis
3. News rules
4. Clean structure + 200 MA
5. Break of structure
6. Impulse leg + pullback
7. The pullback zone
8. Entry confirmation
9. Stop + trade management
10. Risk + daily limit

All or nothing. If one step is missing, there is no trade. Keep this next to your screen and check every box before you enter.

STEP 1

Daily routine

The same morning every day. Consistency is the edge.

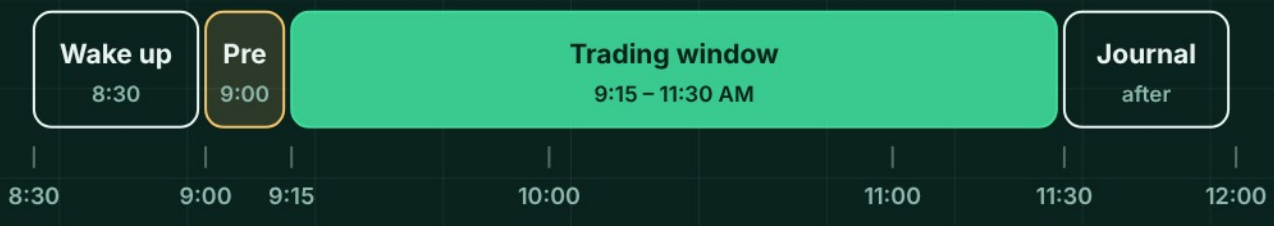

THE RULES

- Up at **8:30 AM ET**
- At the desk by **9:00**
- Pre-market analysis **9:00–9:15**
- Trade **9:15–11:30 AM ET** only
- Journal your trades after the session

EXAMPLE

A trading morning, ET

Same times every day. Done at 11:30, win or lose.

STEP 2

Pre-market analysis

9:00–9:15. You walk in with a plan, never a guess.

THE RULES

- Check the news on **Forex Factory**
- Mark your key levels on the chart
- Review what price did pre-session (Asia and London)
- Form a **bias** and a thesis for where price can go
- Decide which setup you are looking for

EXAMPLE

STEP 3

News rules

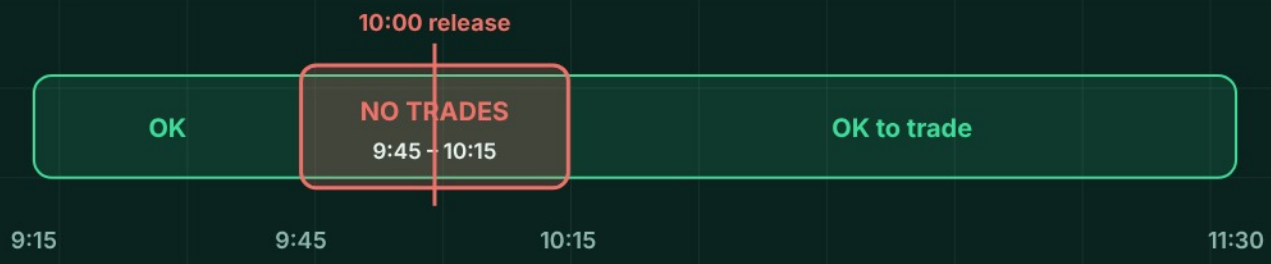

News makes price jump around. We step aside.

THE RULES

- Check **Forex Factory** every morning
- **Bank holiday** = no trading at all
- **Red-folder news:** no trades 15 minutes before and 15 minutes after the release

EXAMPLE

Example: red-folder news at 10:00 AM

15 minutes before + 15 minutes after. Bank holiday = no trading at all.

STEP 4

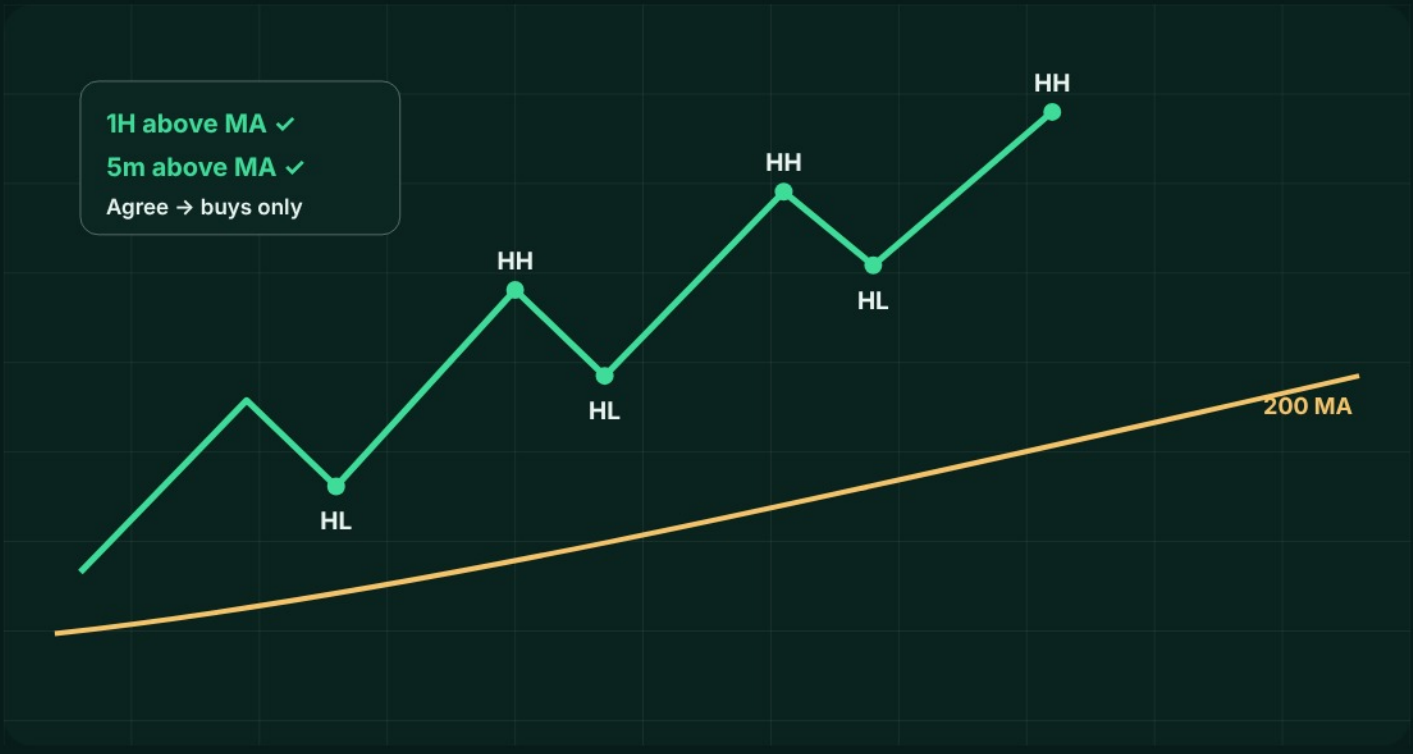

Clean structure + 200 MA

Only trade charts where the trend is obvious.

THE RULES

- Clean structure = swing points you can spot **instantly**
- Uptrend: higher highs and higher lows. Downtrend: lower highs and lower lows
- Price **above** the 200 MA = buys only. **Below** = sells only
- The **1-hour** and your **3–5 minute** chart must agree
- Messy structure, or the timeframes disagree = no trade

EXAMPLE

STEP 5

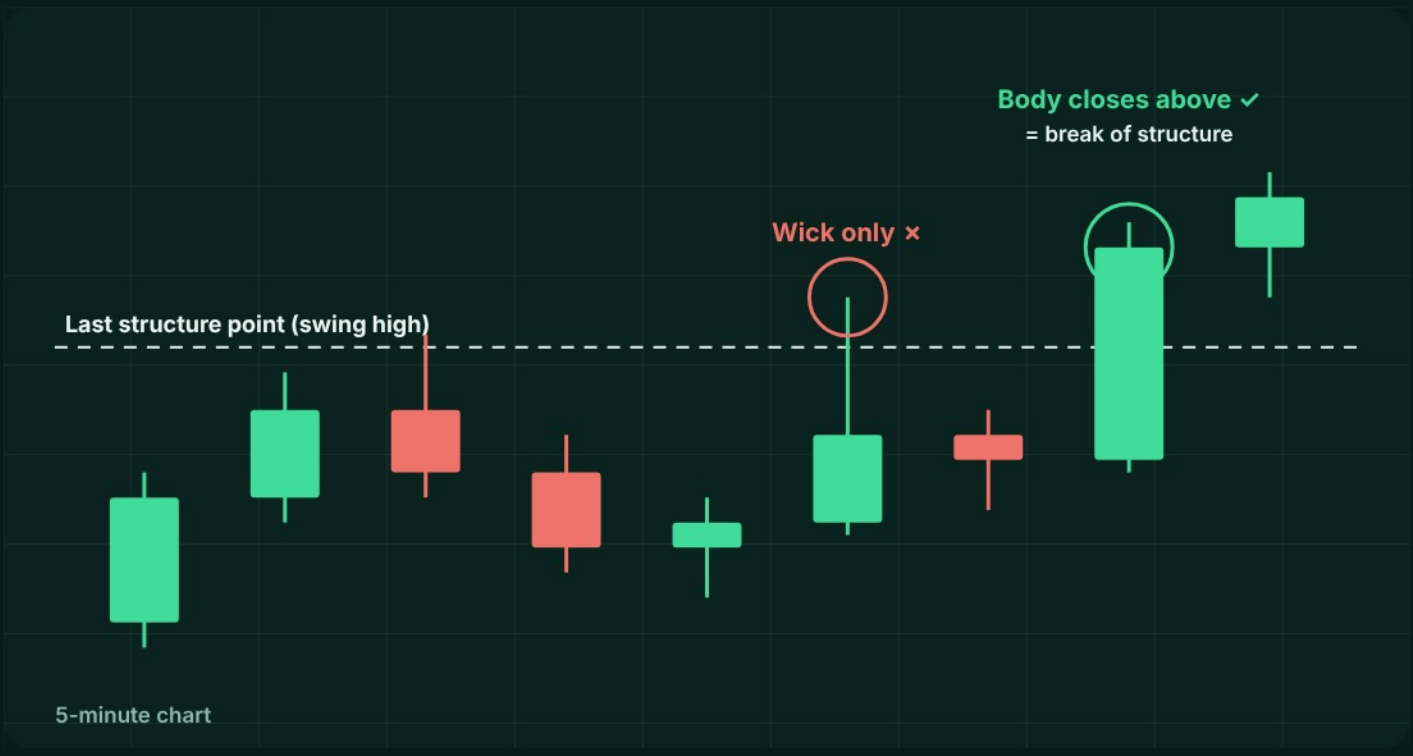

Break of structure

The market proves the trend is still alive.

THE RULES

- A **5-minute candle body closes** past the most recent structure point
- Above it for buys, below it for sells
- A **wick does not count**. Wait for the close

EXAMPLE

STEP 6

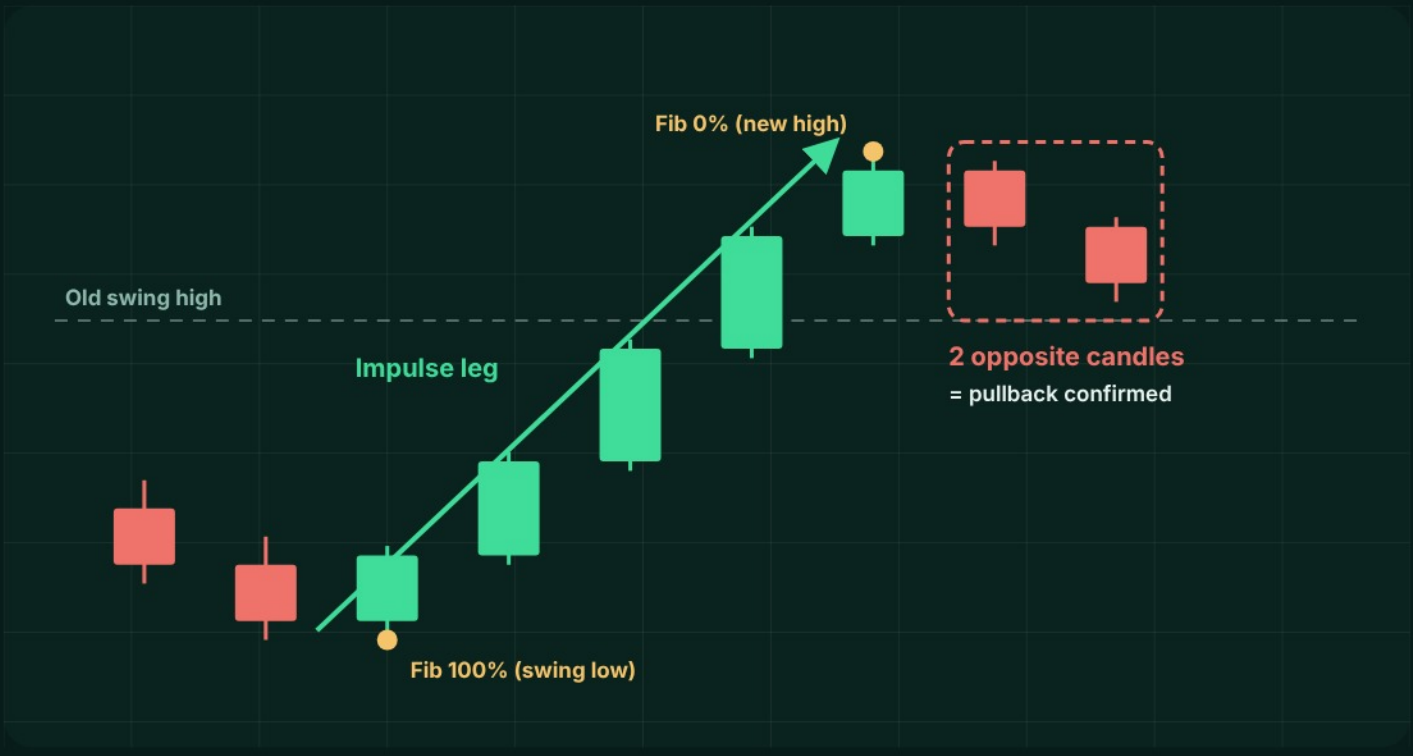

Impulse leg + pullback

Find the leg, confirm the pullback, then draw the fib.

THE RULES

- The **impulse leg** is the move that broke structure
- A pullback is confirmed by **two opposite-color candles** (2 red on a buy)
- Draw the fib on the impulse leg: buys from the swing low (100%) to the new high (0%)
- Sells: from the swing high down to the new low

EXAMPLE

Education only, not financial advice. Trading futures carries substantial risk of loss.

Sells are the mirror image of every buy example.

STEP 7

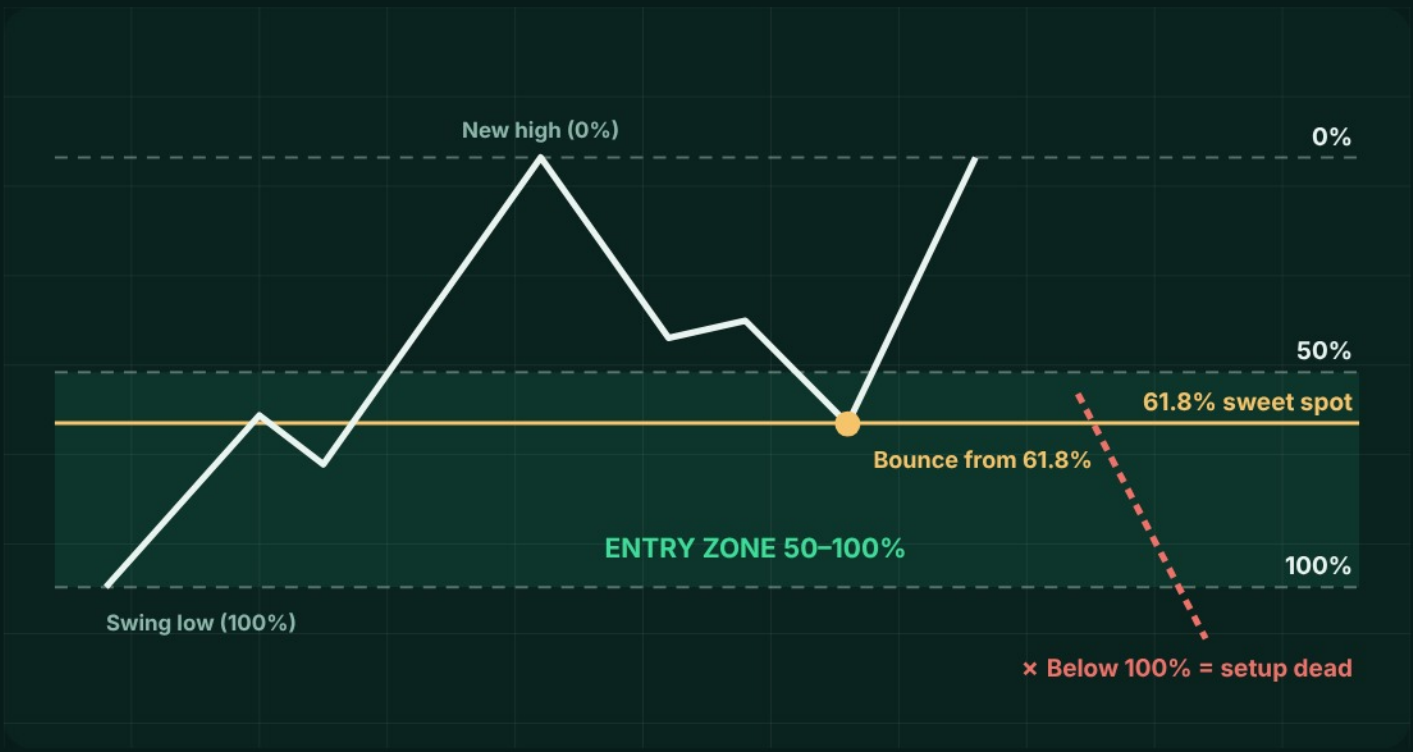

The pullback zone

Patience. Let price come to you.

THE RULES

- The entry zone is **50–100%** of the fib
- **61.8%**, the golden ratio, is the sweet spot
- If price breaks **100%** (the last structure point), the setup is **dead**

EXAMPLE

STEP 8

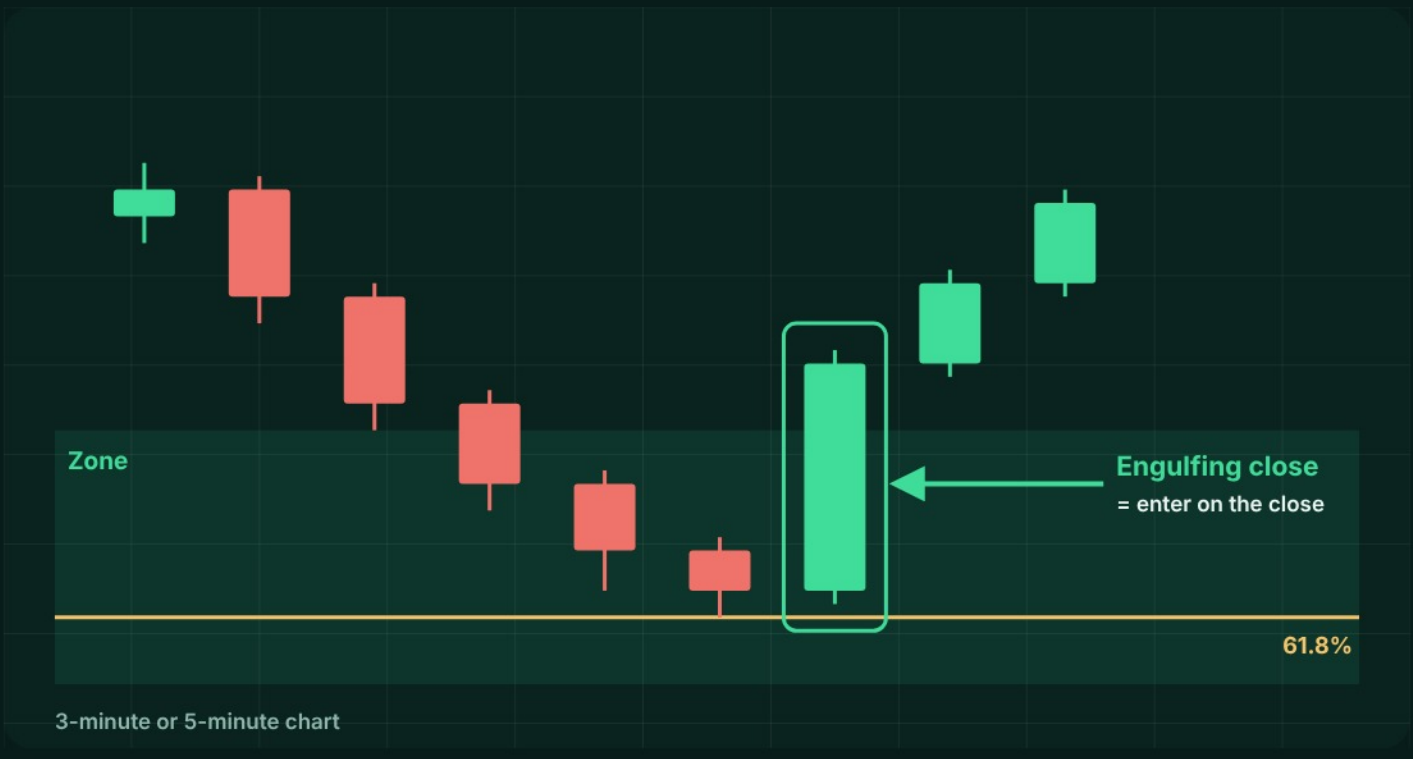

Entry confirmation

No confirmation, no trade.

THE RULES

- Wait for a strong **engulfing candle** that closes inside the zone
- Use the **3-minute or 5-minute** chart
- Enter **on the close** of that candle

EXAMPLE

STEP 9

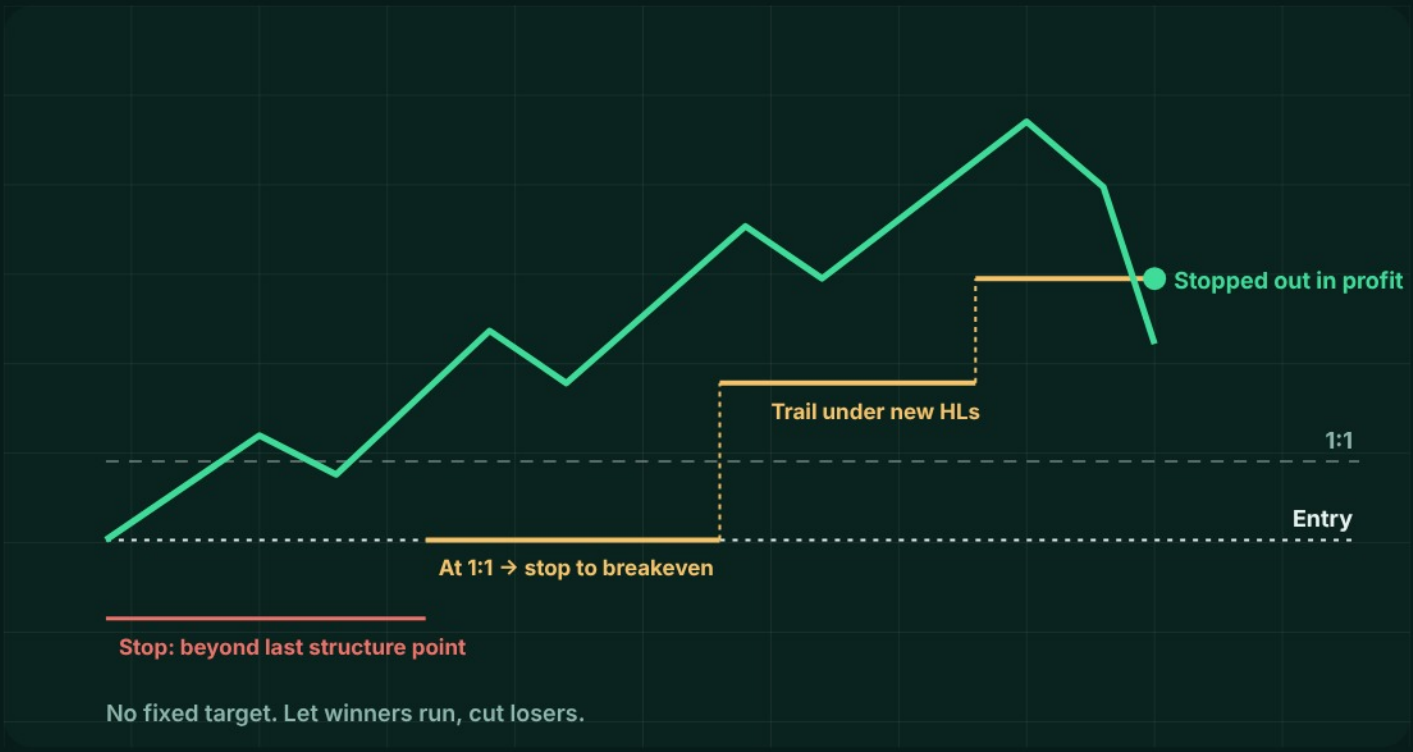

Stop + trade management

Protect the downside, let the upside run.

THE RULES

- Stop goes **beyond the last structure point** (the 100% level)
- At **1:1**, move your stop to **breakeven**
- Then **trail** your stop under each new higher low (above each lower high on sells)
- **No fixed target.** Let winners run, cut losers

EXAMPLE

STEP 10

Risk + daily limit

Small losses, big winners, and a hard stop on the day.

THE RULES

- Risk **1–2% per trade**. Pick what fits your personality and keep it the same
- **First trade loses = done** for the day
- **First trade wins** = you may take **one more**. Max 2 trades a day
- Journal every trade with a screenshot

EXAMPLE

Trade 1 loses → done. Trade 1 wins → one more, max.

Day A	Loss −1R	Done	**−1R**
Day B	Win +2R	Loss −1R	**+1R**
Day C	Win +2R	Win +2R	**+4R**

Using a 2R winner as the example. Winners can run further.

BEFORE EVERY TRADE

The V1 checklist

Every box ticked, or no trade.

- [ ] It is between 9:15 and 11:30 AM ET
- [ ] No red-folder news within 15 minutes, not a bank holiday
- [ ] Pre-market done: levels marked, bias set
- [ ] Structure is clean, with clear swing points
- [ ] 1-hour and 3–5 minute both on the same side of the 200 MA
- [ ] A 5-minute body closed past the last structure point
- [ ] Two opposite-color candles confirmed the pullback
- [ ] Fib drawn on the impulse leg, price is in the 50–100% zone
- [ ] Price has not broken the 100% level
- [ ] A strong engulfing candle closed inside the zone
- [ ] Stop is beyond the last structure point, risk is 1–2%
- [ ] This is trade 1, or trade 2 after a win

In the trade: breakeven at 1:1, then trail. No fixed target.
After the session: journal every trade with a screenshot.

Education only, not financial advice. Trading futures carries substantial risk of loss.
